
ASSIGNMENT 3- JS EVENTS AND FORMS

Use event listeners for the next exercises:

1. Create a calculator in Javascript. Use `eval()` function to evaluate the Math operations
2. Write a Javascript program with an image. When clicking the image, it will be replaced by a message in a paragraph. Use three strategies (Submit three scripts):
 - a. Remove the image element and add a paragraph element (p)
 - b. Replace the image element by a paragraph element
 - c. The two elements exist. Use the *display* and/or *visibility* CSS properties to hide or show the elements.

3. Modify the form of your term2 final assignment. Use at least:
 - a. Three form events
 - b. HTML5 Built in form validation
 - c. Constraint Validation DOM Methods
 - d. Javascript validation with `PreventDefault`
 - e. Regular expression validation
